

Some comments on the assignments

Eugenio Caperchione

September 2019

Important starting points

A relevant problem: let's look to reality!

Ideas for a solution

Feasibility analysis: external and internal conditions

Obstacle?

Who will be the advocates?

Expected benefits – and costs

Time needed to implement

Transferability

Evaluation

Problems are generally clear, solutions sometimes less clear

Analysis of conditions needs to be improved

No obstacles? Really?

Do we need training? What kind of ~?

Please report timing, benefits, costs

Limited focus on transferability and sustainability

Formal aspects

A title would help (and an acronym?)

An abstract may also help

Contents

Systematic use of digital innovation, apps, etc.

Ok, but pay attention to problems of privacy, implementation costs, digital divide, security levels sometimes too high and sometimes too low

Where do ideas come from?

Lot of re-use of existing ideas: ok, right

Copying and adapting makes sense – also out of Public sector

Behn, programmatic kleptomania

Hartley, Proposition 4 «harvesting ideas and practices from others saves time and money»

Personal involvement and partnerships

Best choice would be to offer one's willingness to help in introducing the innovation

But who will collaborate? Who could help?

A little suggestion

Read the proposal several times

Ask colleagues and friends to read it for you,
ask for their opinion and suggestions:
important, also to start collaboration

Invite friends for a beer (Behn ...)

Look for people with different backgrounds
